DE-IONISED WATER

Description:
Deionised Water, or DI water, is water that has had all (or most) ions removed. The ions present in water can often be picked up through soil, such as calcium or sodium. Ions Iron and Copper can also be picked up through the water pipes. Ions are a substance naturally present in water,

BATCH NO:

IF CONTAINERS ARE NOT RETURNED, THEY SHOULD BE DISPOSED OF AS PER THE DANGEROUS GOODS REGULATIONS.

WARNING:

Deionized water may still have organic compounds — including viruses or bacteria — that can make you sick. This sounds counterintuitive, given that deionized water is thought of as "pure." But "purity" with respect to deionization means the water is free from charged molecules.
